**Abstract**

---

A machine having injection needles for injecting fluids into meat products comprising a table (11) having a conveyor (12) mounted thereon. A pair of reciprocating arms (36, 38) are pivotally connected to table sides. Fluid manifold (40) comprised of fluid manifolds (136, 138, 140, 142, 144, 146) is secured to the arms and extends across the table. Stripper plate (154) is secured to the fluid manifolds. Pumps (92, 94, 96, 98, 100, 102) with pistons (106) move reciprocating arms (36, 38).
